

How to Use Success Signal Analysis

Find the signal hiding in your past campaigns.

Success Signal Analysis reviews your recent Kit email broadcasts, compares your best and worst performers, and turns the pattern into evidence-backed experiments. About a minute, no signup — you only need a Kit API key, used once and never stored.

Live at **successsignals.optimizationdoc.com**.

Step 1 — Open the site

Go to **successsignals.optimizationdoc.com**. One form. Nothing to install, no account to create.

SUCCESS SIGNAL ANALYSIS

FIND THE SIGNAL HIDING IN YOUR PAST CAMPAIGNS.

Success Signal Analysis reviews your recent Kit broadcasts, compares your winners and losers, and turns your past performance into evidence-backed marketing experiments.

Kit API key

Kit → Settings → Developer → V4 API key. [How do I get one?](#)

Your email

We email you a copy of the report.

Your Kit API key is used only to retrieve campaign data for this analysis and is not stored. It runs server-side for a single analysis and is discarded immediately after.

Primary goal

Business model

Step 2 — Get your Kit API key

Click "**How do I get one?**" under the API-key field. The pop-up walks you through it: open Kit → **Developer Settings**, **Add a new key**, choose the **V4 API key**, name it `successsignals`, and copy it (Kit shows it once). Your key is used for this one analysis and never stored.

~ bash {image}

/Users/jethrojoness/jethro/successsignals/tutorial-shots/02-get-api-key.png

~

Step 3 — Tell it your goal

Paste your key and email, then pick your **primary goal** — more opens, clicks, sales, replies, or fewer unsubscribes — plus your business model. The short context questions make the analysis sharper. Press **Analyze My Campaign Signals**.

Coaching/consulting

Broadcasts to analyze

20

Between 1 and 50. Defaults to 20.

Briefly, what are you trying to accomplish with your list?

Grow my coaching list and book more discovery calls.

Which recent campaign surprised you, if any?

What do you believe is already working?

Personal stories seem to land best.

Analyze My Campaign Signals

Built by [Optimization Doc](#) · Recommendations are experiments, not guarantees.

Step 4 — It reads your campaigns

Six stages: connecting to Kit, pulling broadcasts and stats, comparing winners vs. losers, and writing the analysis. This is where the key is used — server-side, once, then discarded.

```

WORKING...

READING YOUR CAMPAIGNS.

- ✓ Connecting to Kit
- ✓ Retrieving broadcasts
- ✓ Retrieving broadcast details
- ⦿ **Retrieving broadcast stats**
- Comparing winners and losers
- Generating Success Signal Analysis

Built by [Optimization Doc](#) · Recommendations are experiments, not guarantees.

Step 5 — Your Success Signal Analysis

The report opens with an **Executive Summary** and a table of every campaign — winners flagged green, losers red — each scored on the goal you picked.

SUCCESS SIGNAL ANALYSIS

Executive Summary

- Curiosity-gap subject lines consistently yield higher open rates, appearing in 2 of the top 3 campaigns.
- Short, single-CTA emails outperform longer, multi-CTA emails in open rates, as seen in the top 2 campaigns.
- Conversational tone in subject lines correlates with higher open rates, used in 5 of the 6 campaigns, including the top 3.
- Educational style is present across all campaigns, suggesting it supports high open rates when paired with other factors.

Your Success Goal

The sender is optimizing for higher open rates to test their production pipeline.

Campaigns Analyzed

SUBJECT	SENT	RECIPIENTS	OPEN	CLICK	UNSUB	SCORE
---------	------	------------	------	-------	-------	-------

Step 6 — Evidence-backed signals

Each **signal** cites specific campaigns as evidence, connects to a marketing principle (only after the evidence, never as proof), gives one concrete experiment, and shows a confidence level. No generic advice — all grounded in your data.

Success Signals Detected

Curiosity-gap subject lines boost opens HIGH

Evidence

- #23624729 and #23625753 (both in top 3) used curiosity-gap subjects and had open rates of 77.78% and 73.53%, respectively.
- #23730708 and #23730705 (bottom group) also used curiosity-gap subjects but had significantly lower open rates of 55.18% and 54.41%.

Curiosity-gap subject lines entice recipients to open emails to satisfy their curiosity.

Email & direct-response craft: Curiosity-gap and personal subject lines open loops; generic subjects don't.

Experiment: Test more curiosity-gap subject lines across different email styles.

Why High confidence: Consistent pattern across both top and bottom groups, despite differing content features.

Single-CTA emails drive higher open rates MEDIUM

Evidence

- #23624728 and #23624729 (top 2) both had a single CTA and achieved open rates of 82.26% and 77.78%.
- #23625753 (top group) had multiple CTAs and a lower open rate of 73.53%.

Single-CTA emails focus the reader's attention, reducing decision fatigue and improving engagement.

Email & direct-response craft: One clear CTA per email — competing asks dilute clicks.

Experiment: Limit emails to a single CTA to see if open rates improve.

Why Medium confidence: Limited sample size but clear pattern in the top group.

Step 7 — Take action and keep it

Finish with a **30-day experiment plan** — what to test, how to measure, what success looks like. **Copy report** or **Download .md** to keep it; a copy is emailed automatically. **Re-run** to try a different goal.

~ bash {image}

/Users/jethrojonas/jethro/successsignals/tutorial-shots/07-plan-export.png

~

Next 30-Day Experiment Plan

1. Test curiosity-gap subject lines in all upcoming emails.

Why: To confirm their effectiveness in increasing open rates across different email types.

How to measure: Compare open rates of emails with curiosity-gap subjects against those without.

Success looks like: A consistent increase in open rates for emails with curiosity-gap subjects.

2. Limit future emails to a single CTA.

Why: To determine if simplifying the call-to-action increases open rates.

How to measure: Track open rates and click-through rates of single-CTA emails versus multi-CTA emails.

Success looks like: Higher open and click-through rates in single-CTA emails.

3. Maintain conversational tone in diverse email subjects and styles.

Why: To see if a conversational tone consistently supports higher open rates.

How to measure: Monitor open rates of emails with conversational tone across various contexts.

Success looks like: Sustained or improved open rates with a conversational tone.

Data Limitations

- Open rates may be affected by external factors not captured in the data, such as email list quality or timing.
- The sample size is limited, especially in the top group, which may affect the reliability of conclusions.
- Lack of revenue data limits insights into the financial impact of open rates.

The whole flow: paste key → pick goal → get an evidence-backed analysis you can act on this month. Recommendations are experiments, not guarantees.
